

International conference on CANCER CARE & CURE 2018

 **12 - 13 February, 2018**

 **St. Hughs college, Oxford University,
Oxford, UK**

**Theme of the conference - “Innovating science and technology
for curbing oncology crisis”**

Series - II

Overview

It is to celebrate the discoveries of many researchers, scientists, industrialists and fellow professionals to educate, ideate, network, produce and promote science advancements in curbing and curing the challenges of cancer disease. In that way, here Clyto Access welcomes you to the International Conference on Cancer Care and Cure - series II, will be held on 22nd-23rd February 2018 at Oxford university, London, UK, with the theme “Innovating science and technology for curbing oncology crisis”.

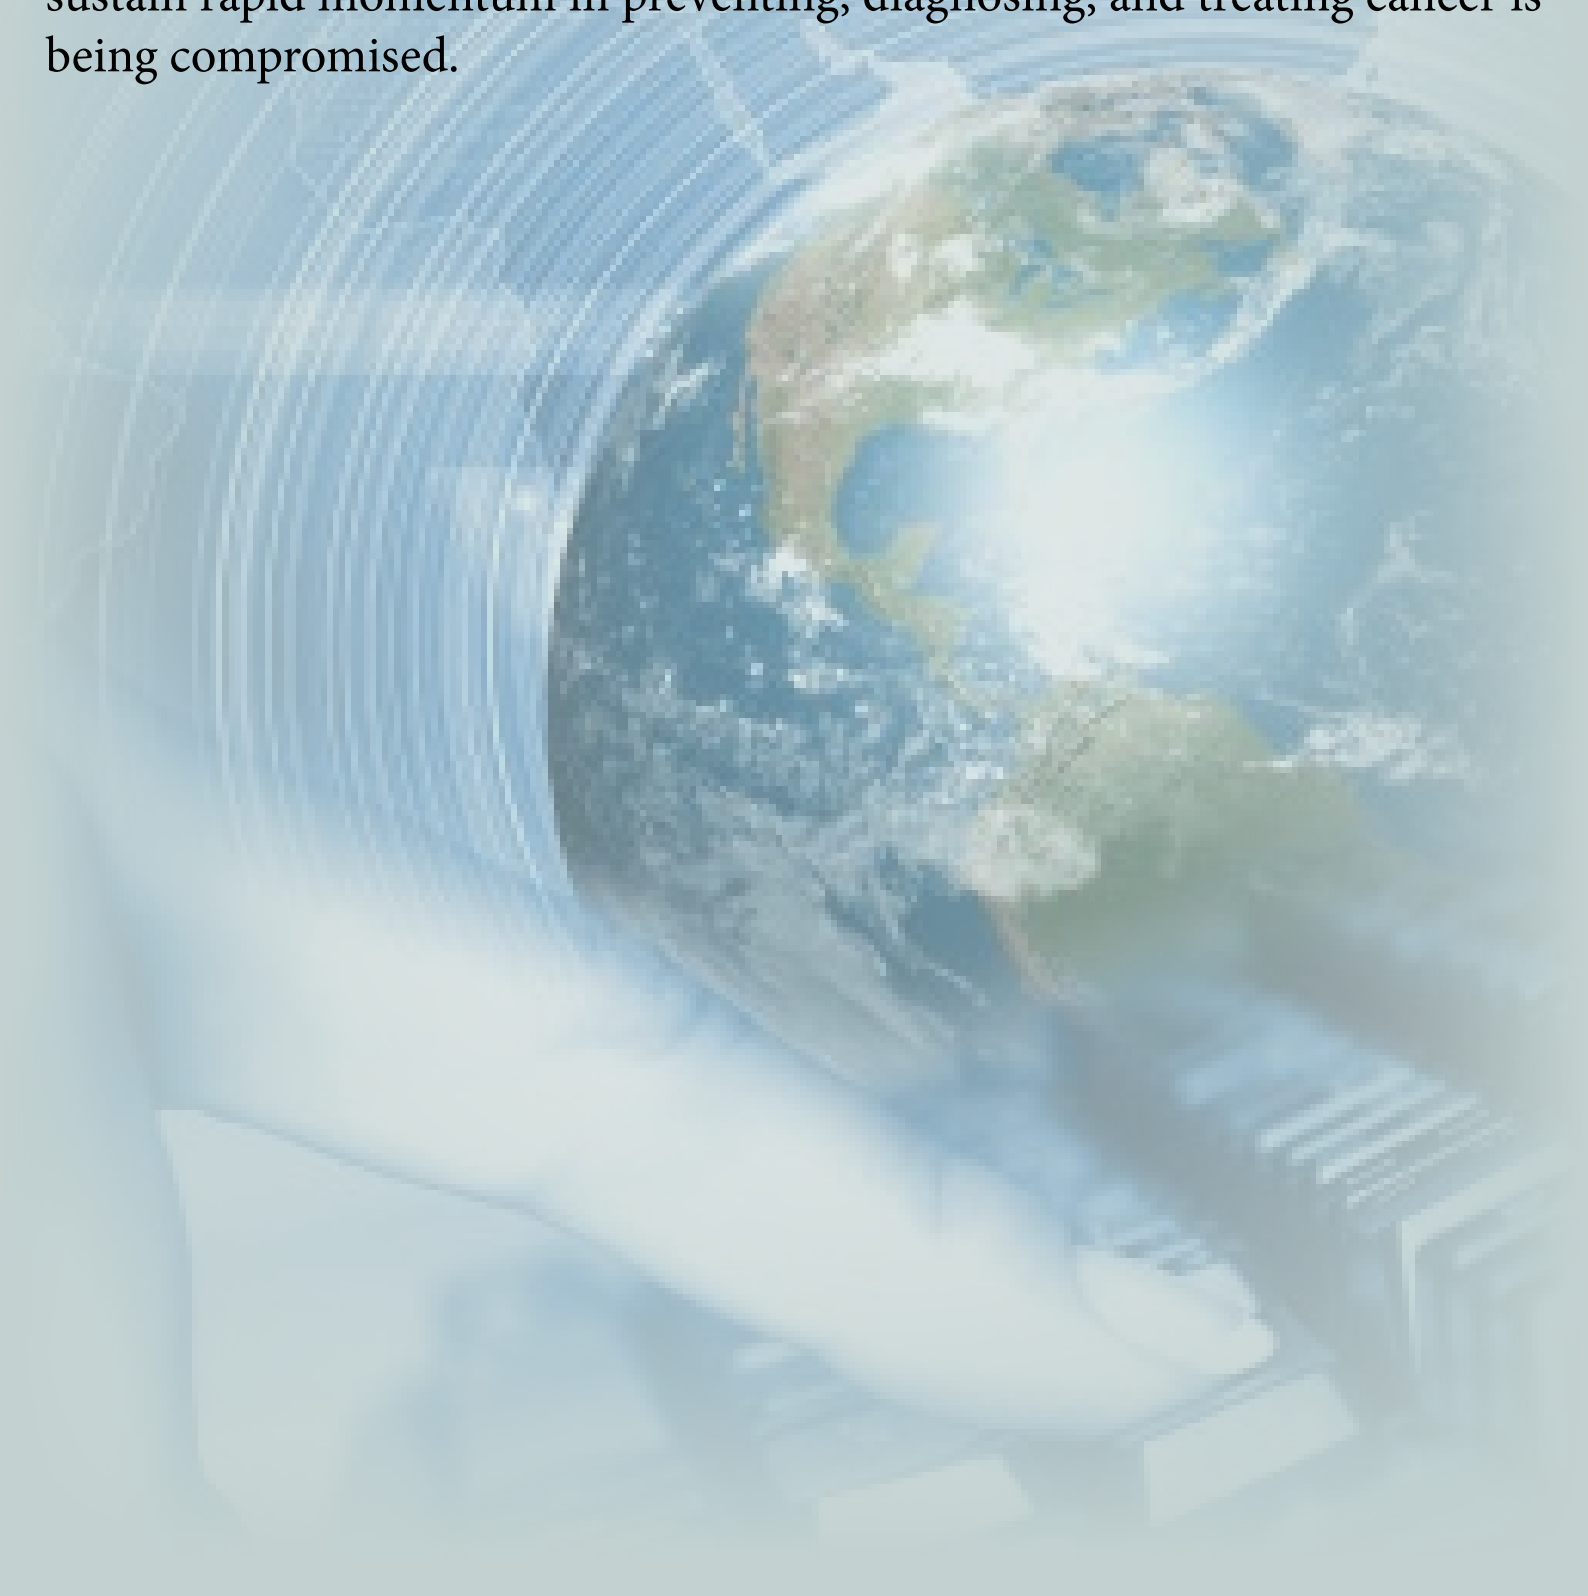

The surge of innovation in cancer treatments is catching the attention of health system stakeholders and participants around the world. Providers and patients have more choices – and face more complexity - in treatment options, including the possibility of dramatic increases in progression free and overall survival. Payers are also noticing the impact on drug budgets of longer treatment duration and increased numbers of patients receiving treatment. The focus of the second series of this conference would address these factors.

Global Funding

Recent Trends in NCI Budgets

Since 2003, with the exception of the funding received through ARRA, there has been a decade-long hiatus in financial growth in the nation's investment in cancer research. Coupled with the increased expense of research and the loss of nearly 25% of the NCI budget in constant dollars since 2003 due to inflation, the institute's ability to exploit promising opportunities and to sustain rapid momentum in preventing, diagnosing, and treating cancer is being compromised.

Scientific Session 2018

Clyto Access presents International Conference on Cancer Care and Cure - series II, will be held on 22nd-23rd February 2018 at Oxford University, London, UK, with the theme “Innovating science and technology for curbing oncology crisis” where key factors on the current trends and scientific researches that the industry and professionals work upon would be prioritized to elevate the knowledge of all that would be present.

The conference would include, scientific sessions, such as plenary talks, poster presentations, paper presentations and out of the box activities.

Highlighted points of importance:

- Non – invasive fluid biopsy implementation
- Cancer diagnostics – Real time method PCR etc
- Genetic makeup - Understanding genetic and lifestyle cause of diseases
- Preclinical imaging and Bio-imaging
- Next generation targeted therapies
- Molecular cancer diagnostics – systems approach and others
- Artificial intelligence based therapy design – IBM's Watson, etc
- Multi functional radiology
- In silico trials: organs-on-a-chip technique
- DNA Cages
- Precision surgery – DaVinci robots, CyberKnife, iKnife etc
- Multidrug resistance in cancer cells
